# THE TEXLINE FACTS

## APPLES & ORANGES

#### WE ARE NOT COMPARING APPLES WITH APPLES

A 0.4mm wearlayer is not equivalent in quality to another 0.4mm wearlayer product.

A 3.1mm thick product is not always equal in performance to another 3.1mm thick product.

TEXLINE OUTPERFORMS THE COMPETITORS IN THE TEXTILE-BACKED VINYL FLOORING CATEGORY HOW ?

#### WEIGHT

#### **11-22%** HEAVIER (G/M2) THAN THE COMPETITION.

WHAT DOES THIS MEAN? Texline is heavier than other textile-backed products. This means that it is easier to install perfectly flat and it remains rigid throughout its lifetime. This also means Texline can be loose laid over an unlimited area.

TEXLINE	
	(0.3mm 2.9mm) - 2000 g/m <sup>2</sup>
Competitor 1	
	(0.25mm 2.2mm) - 1650 g/m <sup>2</sup>
Competitor 2	
	(0.25mm 2.6mm) - 1650 g/m <sup>2</sup>
TEXLINE COMFORT	
	(0.35mm 4mm) - 2440 g/m <sup>2</sup>
Competitor 3	
	(0.35mm 2.8mm) - 1800 g/m <sup>2</sup>
TEXLINE HQR	
	(0.4mm 3.1mm) - 2300 g/m <sup>2</sup>

lan Life I X/Tarkett 2801	(0.4mm 2.8mm) - 2000 g/m <sup>2</sup>
Competitor 5	
	(0.4mm 2.8mm) - 1800 g/m <sup>2</sup>

### WHY IS TEXLINE HEAVIER?

WHAT DOES THIS MEAN A chemical foam backing can delaminate because of the chemical and mechanical bonding process. A compact foam backing means no delamination and high resistance to traffic.
